

# EMERGENCY MEDICINE DASHBOARD

# EMERGENCY MEDICINE DASHBOARD

- Works with plasma screen, iPad or standard PC / Mac
- Displays real time key performance data
- Helps improve department efficiency and monitor key performance indicators
- Collects data automatically from hospital systems
- Each user can easily configure the data to be displayed without help from IT
- Each user's access to data depends on their permissions (for governance)
- Minimal IT assistance required for set up
- No special hardware required, but plasma screens etc. may be supplied and installed
- No capital outlay or staffing costs
- Monthly payment
- Additional software available, includes:
  - Expert clinical risk pre-assessment (based on POSSUM and dataset of over 1m)
  - Bespoke healthcare applications

## Reporting as a Service

Timely and easily accessible key performance data is necessary to allow frontline emergency medicine teams to maximise the efficiency of their departments. Most of the data needed is usually available within the hospital but IT departments rarely have the resources to implement high quality dashboards and then keep these matched to the changing needs of the clinical staff and government directives. L2S2 are specialists in this field and offer a low cost alternative to in-house development, capital equipment and specialist support staff. The dashboards are provided from CfH approved servers connected to the hospital by the NHS N3 network with fully Caldicott compliant data handling. Governance approval has been achieved with many large UK Trust Hospitals. The economic arguments for outsourcing specialist reporting are compelling, particularly at a time when budgets are constrained and expenditure on capital equipment and staffing is restricted. L2S2 reporting systems require minimal staff resources from the IT department at the time of commissioning and once in place require no hospital staff resources.

L2S2 Ltd will provide the dashboard for a single monthly fee that includes initial interfacing, configuration, hosting and maintenance.

The actual monthly fee will be negotiated with the hospital when the hospital's existing emergency medicine system is determined. L2S2 have performed several successful integrations with emergency medicine systems in hospitals in the UK.

## About L2S2 Medical

L2S2 Medical is the healthcare division of L2S2 Ltd. L2S2 specializes in the specification, design and implementation of data acquisition, processing and visualization systems. Our skilled staff has many years of experience in instrumentation, NHS medical systems and software implementation. We have worked for many blue-chip companies around the world and we manage our systems in several UK NHS hospitals and GP practices.

L2S2 supplies and maintains managed services for several NHS Trust hospitals and works with the UK Health Protection Agency (HPA) to collect EM data from hospitals for the national syndromic disease monitoring programme. The company has extensive expertise in interfacing to current and legacy hospital systems and is experienced in emergency medicine, clinical informatics and intensive care management.
